1. The number of visitors to an animal rescue centre and the total donations received were recorded every day for 7 days.

The table and scatter diagram below show the results.

<table>
<thead>
<tr>
<th>Day</th>
<th>Monday</th>
<th>Tuesday</th>
<th>Wednesday</th>
<th>Thursday</th>
<th>Friday</th>
<th>Saturday</th>
<th>Sunday</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of visitors</td>
<td>40</td>
<td>10</td>
<td>16</td>
<td>30</td>
<td>25</td>
<td>55</td>
<td>12</td>
</tr>
<tr>
<td>Total donations (£)</td>
<td>90</td>
<td>28</td>
<td>46</td>
<td>70</td>
<td>62</td>
<td>120</td>
<td>100</td>
</tr>
</tbody>
</table>
(a) Draw, by eye, a line of best fit on your scatter diagram. [1]

(b) Describe the relationship between the number of visitors and the total donations. [1]

(c) Which particular day does not fit the relationship? [1]

(d) The animal rescue centre manager says:
"If we have 35 visitors to the centre next Wednesday we will definitely receive £80 in donations."

(i) Explain how the manager may have come to this conclusion? [1]

(ii) Is the manager's statement correct?
    You must give a reason for your answer. [1]
2. The scatter graph shows the age and the price of 18 cars.

The cars are all the same make and model.
Use a line of best fit to estimate the price of a 6-year old car.
3. In a survey, the outside temperature and the number of units of electricity used for heating were recorded for ten homes.

The scatter diagram shows this information.

Molly says,

"On average the number of units of electricity used for heating decreases by 4 units for each °C increase in outside temperature."

(a) Is Molly right?

Show how you get your answer.

(b) You should not use a line of best fit to predict the number of units of electricity used for heating when the outside temperature is 30°C.

Give one reason why.
4. This scatter graph shows the values of 15 sports cars plotted against their ages.

a) (i) Lewis thinks that there is no correlation between the ages and values of these cars.
   Is Lewis correct?
   Give a reason for your answer.

b) The car with the highest value is 40 years old.
   Estimate the age of the car with the lowest value.

b) ........................... years [2]
5. The scatter diagram shows information about 10 students. For each student, it shows the number of hours spent revising and the mark the student achieved in a Spanish test.

One of the points is an outlier.

(a) Write down the coordinates of the outlier.

(b) (i) draw the line of best fit,
(ii) describe the correlation.
A different student revised for 9 hours.
(c) Estimate the mark this student got

................................................................. [1]

The Spanish test was marked out of 100
Lucia says: "I can see from the graph that had I revised for 18 hours I would have got full marks."
(d) Comment on what Lucia says.

[1]

4. Katie measured the length and the width of each of 10 pine cones from the same tree.
She used her results to draw this scatter graph.

(a) Describe one improvement Katie can make to her scatter graph.
The point representing the results for one of the pine cones is an outlier.

(b) Explain how the results for this pine cone differ from the results for the other pine cones.

5. The scatter graph shows the number of driving lessons and the number of tests needed to pass by 10 people.

(a) What proportion of the 10 people passed on their first test?

(b) Describe the correlation.
   Circle your answer.

   strong positive    weak positive    weak negative    strong negative

(c) Use a line of best fit to estimate the number of tests needed to pass by a person who has 50 lessons.
(d) Meera says,

"I can use the trend to predict the number of driving tests needed to pass for any number of driving lessons."

Comment on her statement.

Notes:

These questions have been retyped from the original sample/specimen assessment materials and whilst every effort has been made to ensure there are no errors, any that do appear are mine and not the exam board(s) (similarly any errors I have corrected from the originals are also my corrections and not theirs!).

Please also note that the layout in terms of fonts, answer lines and space given to each question does not reflect the actual papers to save space.

These questions have been collated by me as the basis for a GCSE working party set up by the GLOW maths hub - if you want to get involved please get in touch. The objective is to provide support to fellow teachers and to give you a flavour of how different topics “could” be examined. They should not be used to form a decision as to which board to use. There is no guarantee that a topic will or won’t appear in the “live” papers from a specific exam board or that examination of a topic will be as shown in these questions.
